Plot Number: 101-1

PLOT LOCATION - Mortality Plot within 20m x 20m Forest Plot

GPS Coordinates:

Anchor Corner (circle here and on map below):

NE NW SE SW

Landmark 1

Species (or description if not a tree):

Quercus rubra

Compass bearing toward anchor corner:

324° (NW)

DBH (or measurements if not a tree) in cm:

≈ 125cm

Distance to anchor corner in meters:

Landmark 2

Species (or description if not a tree):

DBH (or measurements if not a tree) in cm:

Compass bearing toward anchor corner:

Distance to anchor corner in meters:

Map of Plot and Landmark Locations

Circle the location of the 5m x 5m plot, in one corner of the 20m x 20m larger forest plot.

Label landmark titles and numbers, bearings, trails, roads, buildings, streams, ponds, large boulders and any other features that would help someone to find this plot again if they had never been here before.

Location Description

Describe the location in words, noting any important features that could affect the trees or plant community:

- Area recently underwent large scale *Phellodendron* removal followed by native tree planting. Other invasive species present include *Reinhardtia*, *Phellodendron*.

SAPLING MORTALITY

Record the following information about all individual trees within the plot. A tree is in the plot if its entire stem (trunk) is inside the plot boundary. You will need to enter the plot to record information; while you are doing this, try not to crush other plants. Write clearly and fill in all boxes. Draw a diagonal line through all unused boxes.

Individual	Species - Common or Scientific Name	Survival - 1 for Live, 0 for Dead	If Dead →	Cause of Death	If Alive →	Diameter cm*	Leader Stem - 1 for Live, 0 for Dead	If Leader ALIVE	If Leader DEAD
1	Betula lenta	1		UR BS		1.8	1	LD LC	Less 1/2 Dead More 1/2 Dead
2	" " "	1		UR BS		1.9	1	LD LC	Less 1/2 Dead More 1/2 Dead

UR: plant Uprooted BS: Broken Stem LD: more than 1/2 of Leaves Damaged LC: more than 1/2 of Leaves discolored

*Diameter - take measurement from 6" or so above ground (avoid root flare) and use large jaws of calipers

Dominant Non-Tree Plant Cover

List the 3 non-tree plant species in the plot that cover the greatest area, and estimate percent cover in 25% increments.

Species - Common or scientific name	Estimated percent cover - circle one			
Phellodendron amurense	0-25	25-50	50-75	75-100
Aralia	0-25	25-50	50-75	75-100
Poke weed	0-25	25-50	50-75	75-100

Comments and General Description (on back)

Generally describe the plot, its condition and surroundings, noting any influences that could affect the plant community.
